

## EQUIPMENT, THERMAL IMAGING CAMERA

### Role

The Thermal Imaging Camera (TIC) uses infrared technology to provide sight when visibility is hindered by smoke, fire or darkness. Increased visibility during a fire emergency enables fire fighters to quickly locate a casualty. In addition, the camera's ability to detect different temperatures identifies fire hot spots which can then be quickly suppressed, reducing fire damage.

### Description

#### Dimensions

TIC: 125mm x 280mm x 110mm.

#### Specifications

Model: Dräger UCF 7000.  
Weight: 1.3Kg including battery.  
Display: Liquid Crystal Display (LCD).  
Housing: Rubber material.
